

SESSION - 8

INTRODUCTION TO JAVA 1

Q1. Write a program to replace a substring inside a string with other string ?

The screenshot shows an IDE with a project named 'Assignment1'. The file 'StrReplace.java' is open, showing the following code:

```
1 public class StrReplace {
2
3     public static void main(String[] args){
4
5         String s = "Riya Gupta";
6         System.out.print("string before replacement: ");
7         System.out.println(s);
8         System.out.print("string after replacement: ");
9         System.out.println(s.replace( target: "Ri", replacement: "Dee"));
10
11     }
12 }
13
14
15
```

The output window shows the execution results:

```
Run: StrReplace
/home/riya/.sdkman/candidates/java/8.0.242-zulu/bin/java ...
string before replacement: Riya Gupta
string after replacement: DeeYa Gupta
Process finished with exit code 0
```

Q2. Write a program to find the number of occurrences of the duplicate words in a string and print them ?

```
import java.util.Scanner;
```

```
public class CountOccurrences {
    static int count(String s, String word){
```

```
        String a[] = s.split(" ");
```

```
        int c = 0;
```

```
        for(int i = 0; i<a.length; i++) {
```

```
            if (word.equals(a[i]))
```

```
                c++;
```

```

    }
    return c;
}

public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    System.out.println("Enter a string");
    String s = sc.nextLine();
    System.out.println("Enter the word you want occurrence of: ");
    Scanner sc1 = new Scanner(System.in);
    String word = sc1.nextLine();
    System.out.println("Number of times word is repeated: "+count(s,word));
}
}

```

The screenshot shows an IDE's Run console window titled 'Run: CountOccurrences x'. The console output is as follows:

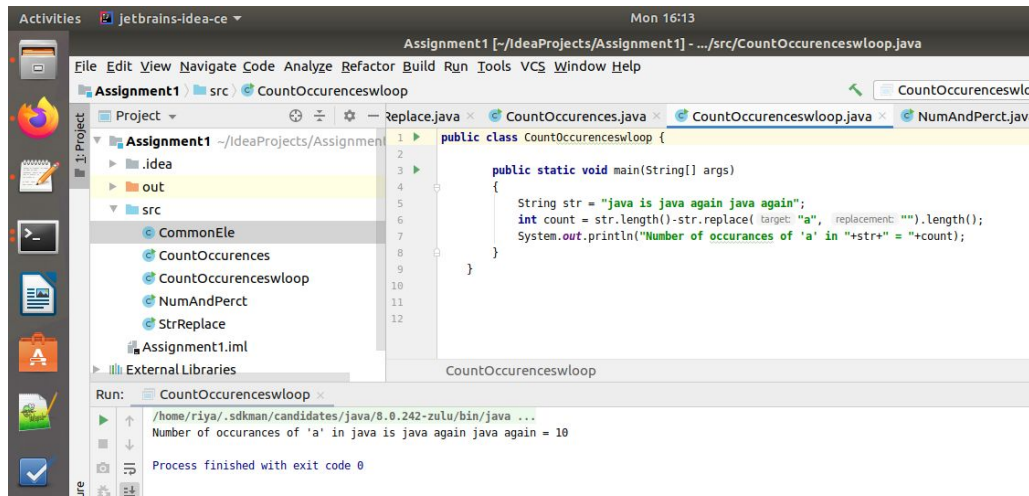

```

/home/riya/.sdkman/candidates/java/8.0.242-zulu/bin/java ...
Enter a string
riya is riya but riya does not laugh.
Enter the word you want occurrence of:
riya
Number of times word is repeated: 3
Process finished with exit code 0

```

On the left side of the console, there is a vertical toolbar with icons for Run, Stop, Debug, and other IDE functions. Below the console, there are tabs for '4: Run', '6: TODO', and 'Terminal'. At the bottom, a status bar indicates 'All files are up-to-date (moments ago)'.

Q3. Write a program to find the number of occurrences of a character in a string without using loop?

Q4. Calculate the number & Percentage Of Lowercase Letters, Uppercase Letters, Digits And Other Special Characters In A String.

public class NumAndPerct {
//Calculate the number & Percentage Of Lowercase Letters, Uppercase Letters, Digits And Other Special Characters In A String.

```
public static void main(String[] args) {
    String data = "Hello HOW are you MR 51";
    char [] charArray = data.toCharArray();
    int upper = 0;
    int lower = 0;
    int digit = 0;
    int others = 0;

    int totalChars = data.length();
    for(int i=0; i<data.length(); i++) {
        if (Character.isUpperCase(charArray[i])) {
            upper++;
        } else if(Character.isLowerCase(charArray[i])) {
            lower++;
        } else if(Character.isDigit(charArray[i])){
            digit++;
        } else {
            others++;
        }
    }
    System.out.println("Total length of the string :"+totalChars);
    System.out.println("Upper case :"+upper);
    System.out.println("Percentage of upper case letters: "+(upper*100)/totalChars);
    System.out.println("Lower case :"+lower);
    System.out.println("Percentage of lower case letters:"+((lower*100)/totalChars));
    System.out.println("Digit :"+digit);
    System.out.println("Percentage of digits :"+((digit*100)/totalChars));
}
```

```

        System.out.println("Others :"+others);
        System.out.println("Percentage of other characters :"+(others*100)/totalChars);
    }
}

```

```

Run: NumAndPerct x
/home/riya/.sdkman/candidates/java/8.0.242-zulu/bin/java ...
Total length of the string :23
Upper case :6
Percentage of upper case letters: 26
Lower case :10
Percentage of lower case letters:43
Digit :2
Percentage of digits :8
Others :5
Percentage of other characters :21
Process finished with exit code 0

```

Q5. Find common elements between two arrays.

```

Run: CommonEle x
/home/riya/.sdkman/candidates/java/8.0.242-zulu/bin/java ...
Riya
Vageesha
Process finished with exit code 0

```

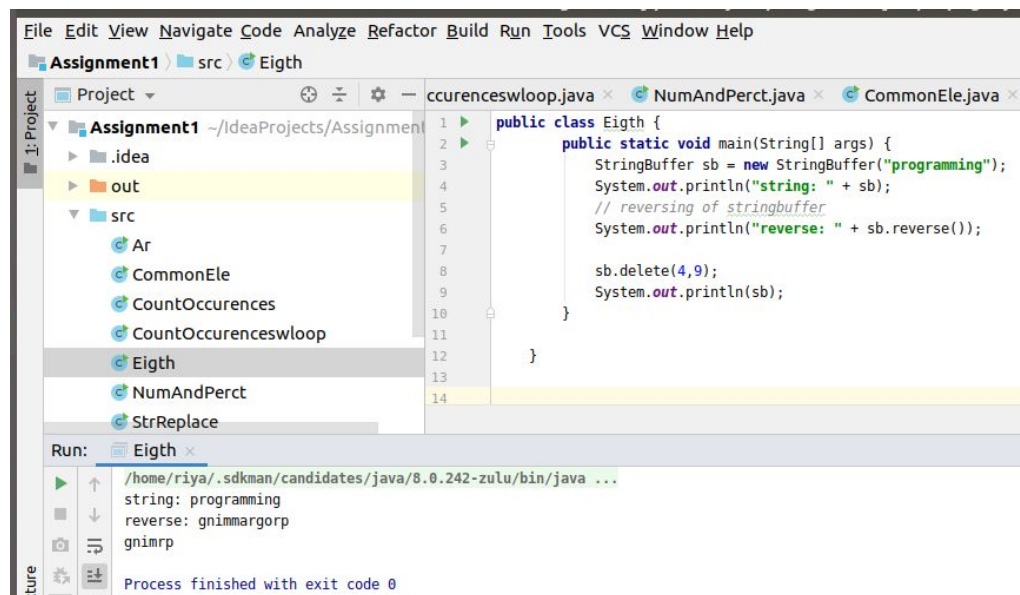

Q6. There is an array with every element repeated twice except one. Find that element.

Q7. Write a program to print your Firstname, LastName & age using static block, static method & static variable respectively.

Q8. Write a program to reverse a string and remove character from index 4 to index 9 from the reversed string using String Buffer

Q9. Write a program to display values of enums using a constructor & getPrice() method (Example display house & their prices)

```

enum House
{
    Noida(100000), Delhi(9200000), Shimla(5000000);
    private double hprice;
}

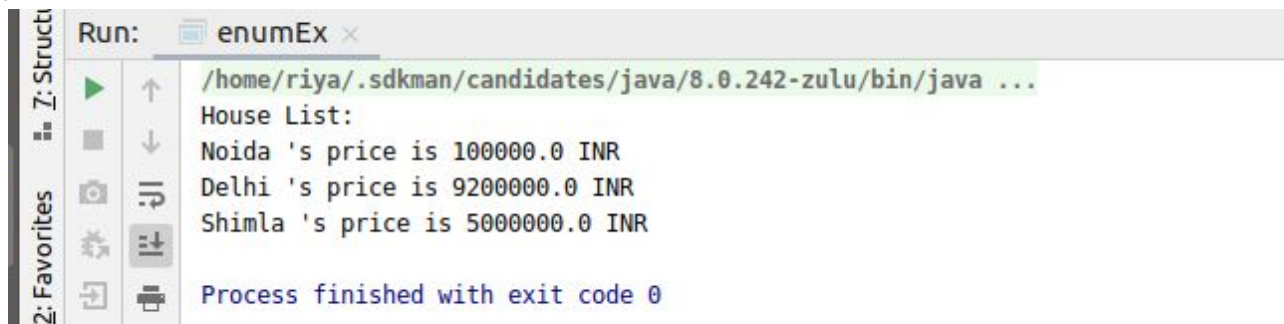

```

```

House(double pr)
{
    hprice = pr;
}

double getPrice()
{
    return hprice;
}
}
public class enumEx
{
    public static void main(String[] args)
    {
        System.out.println("House List: ");
        for(House p : House.values()) System.out.println(p+" 's"+" price is "+p.getPrice()+ " INR");
    }
}

```

The screenshot shows the 'Run' console of an IDE. The command executed is `/home/riya/.sdkman/candidates/java/8.0.242-zulu/bin/java ...`. The output is as follows:

```

House List:
Noida 's price is 100000.0 INR
Delhi 's price is 9200000.0 INR
Shimla 's price is 5000000.0 INR

```

At the bottom, it states: `Process finished with exit code 0`.

Q10. Write a single program for following operation using overloading

- A) Adding 2 integer number**
- B) Adding 2 double**
- C) multiplying 2 float**
- D) multiplying 2 int**
- E) concate 2 string**
- F) Concate 3 String**

```

public class overloading
{
    public void sum(int x, int y)
    {
        System.out.println(x+y);
    }
    public void sum(double x, double y)
    {
        System.out.println(x+y);
    }
}

```

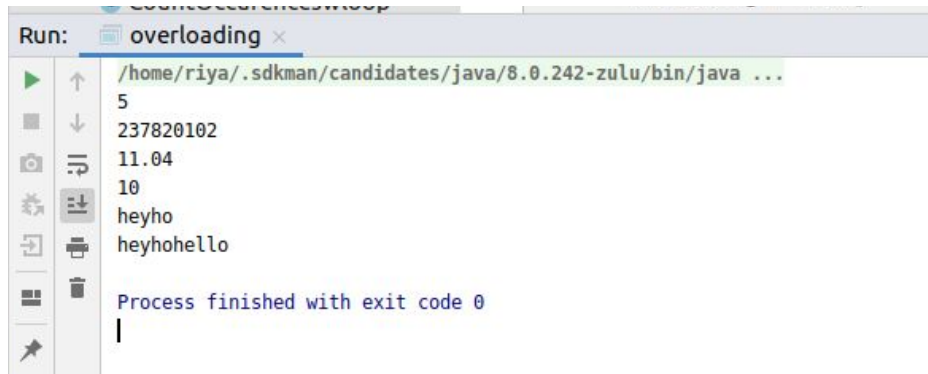

```

public void multiply(float x, float y)
{
    System.out.println(x*y);
}
public void multiply(int x, int y)
{
    System.out.println(x*y);
}
public void concat(String a, String b)
{
    System.out.println(a+b);
}
public void concat(String a, String b, String c)
{
    System.out.println(a+b+c);
}

public static void main(String[] args)
{
    overloading o = new overloading();
    o.sum(2,3);
    o.sum(2354646,235465456);
    o.multiply(2.3f,4.8f);
    o.multiply(2,5);
    o.concat("hey","ho");
    o.concat("hey","ho","hello");
}
}

```

```

Run: overloading x
/home/riya/.sdkman/candidates/java/8.0.242-zulu/bin/java ...
5
237820102
11.04
10
heyho
heyhohello
Process finished with exit code 0

```

Q11.Create 3 sub class of bank SBI,BOI,ICICI all 4 should have method called getDetails which provide there specific details like rateofinterest etc,print details of every banks.

```

public class bank
{
    //Create 3 sub class of bank SBI,BOI,ICICI all 4 should have method called getDetails which provide there specific
    details like rateofinterest etc,print details of every banks.
    public void getDetails()

```

```

        {
            System.out.println("Details of the bank: ");
        }
    }
}
class SBI extends bank
{
    public void getDetails()
    {
        String name = "SBI";
        int id = 1;
        String headquarters = "New Delhi";
        System.out.println("Name: "+ name+" ,ID: "+id+ " ,Headquarters: "+headquarters);
    }
}
class ICICI extends bank
{
    public void getDetails()
    {
        String name = "ICICI";
        int id = 2;
        String headquarters = "Mumbai";
        System.out.println("Name: "+ name+" ,ID: "+id+ " ,Headquarters: "+headquarters);
    }
}
class BOI extends bank
{
    public void getDetails()
    {
        String name = "Bank Of India";
        int id = 3;
        String headquarters = "Kolkata";
        System.out.println("Name: "+ name+" ,ID: "+id+ " ,Headquarters: "+headquarters);
    }
}
}
class main{
    public static void main(String[] args)
    {
        bank b = new bank();
        bank b1 = new SBI();
        bank b2 = new ICICI();
        bank b3 = new BOI();

        b.getDetails();
        b1.getDetails();
        b2.getDetails();
        b3.getDetails();
    }
}

```
